

AMENDMENTS TO THE SPECIFICATION

Please **revise paragraph [0006] of the specification** as follows:

[0006] In order to achieve the above-described object, there is provided a structure for receiving and delivering oil from a first oil path in the wall of the casing to a second oil path within the rotating shaft to be supported by the casing. According to a first feature of the present invention, on the inner side surface of the casing, there is provided a recess in which the first oil path is opened. On the inner peripheral surface of this recess, there is fitted a collar in a floating state through an elastic sealing member. On the inner peripheral surface of this collar, the end portion of the rotating shaft is ~~pivotaly~~rotatably fitted to open the second oil path within the recess.
